

SOFTWARE STUDIO

We design, build and host software.

For people with an idea and businesses with work that software should be doing. Bring us one part of the job, or all of it.

ABOUT REALMJAR

Everything a project needs, kept in one jar.

RealmJar is a software studio that designs, builds and hosts websites and applications for individuals and businesses.

Our logo puts a whole continent inside a single jar. That is the idea behind the name: when the same team plans the design, writes the software and runs the servers, nothing gets lost between them, and you have one place to go when something needs to change.

Design

Websites, apps and interfaces planned around the people who will use them, so they are clear on first use and easy to live with after that.

Development

Custom software for a personal project, a business process or a product you want to launch. Built for what you need now, with room to change later.

Hosting

A home for your website or application that stays online as it grows, without you having to manage servers.

You don't have to use all three. Some people come to us for a design, some for a developer, and some for somewhere reliable to host what they already have.

Plain language

We explain options and trade-offs without jargon, so the decisions stay yours.

Agreed before it's built

Every piece of work starts with a written scope and cost that you approve first.

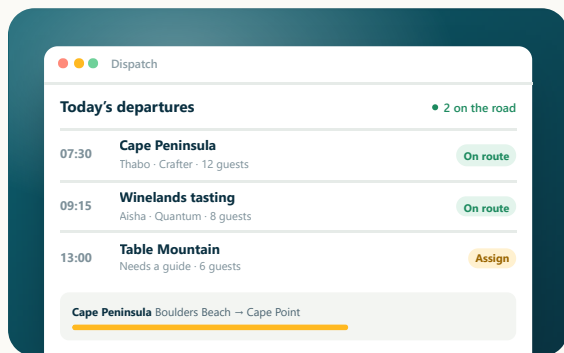

Still here after launch

Because we can host what we build, we are around when it needs fixing, updating or growing.

OUR PRODUCTS

Engines: a head start, not a template.

Each engine is a working foundation we shape around the way your business runs, so you start ahead instead of from a blank page.

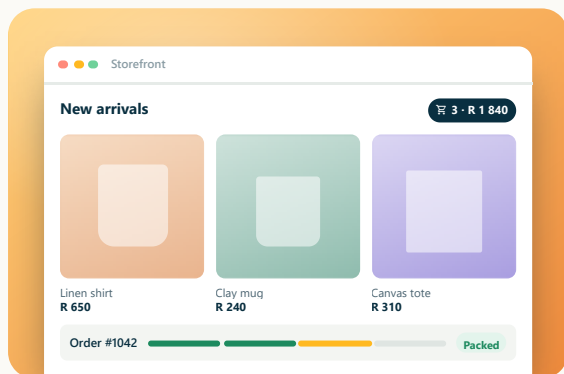

Tour management engine

Run every trip from one screen.

Bookings, guides, vehicles and live dispatch for tour and transfer operators. See the day's departures, who is driving what, and which guests still owe a deposit.

- Bookings and quotes
- Live trip tracking
- Guide and vehicle dispatch
- Guest emails

Powers Tripora · tripora.co.za

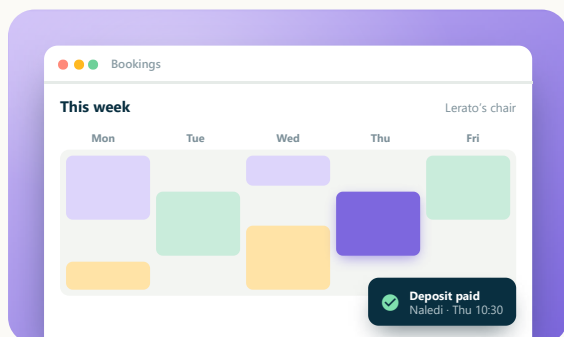

Ecommerce engine

Sell online on your own terms.

A storefront, checkout and order back office shaped around your catalogue, your stock and your delivery rules instead of a template's.

- Catalogue and variants
- Stock across locations
- Checkout and payments
- Order fulfilment

Bookings engine

Let customers book themselves.

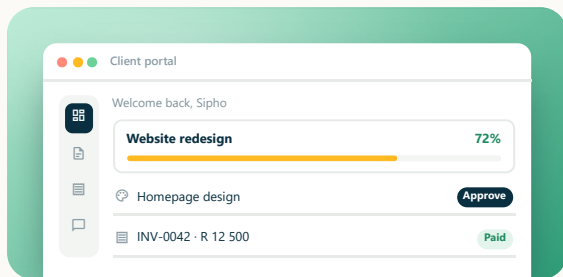

Online scheduling for salons, clinics, studios and rentals: live availability, deposits, reminders and a calendar your staff will actually use.

- Live availability
- Email and SMS reminders
- Deposits and cancellations
- Staff calendars

MORE ENGINES

From the front office to the open road.

Give clients a place to log in, send crews where they need to be, and see how it all adds up.

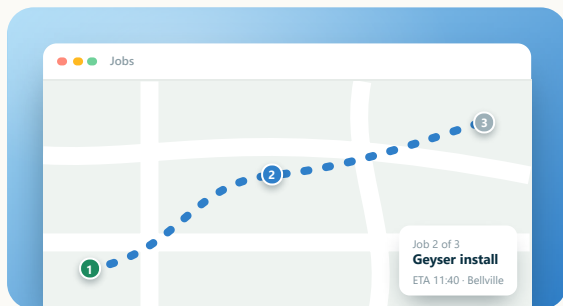

Client portal engine

Give every client their own front door.

A private space where your clients follow progress, approve work, share files and pay invoices, without digging through email threads.

- Secure client sign-in
- Invoices and payments
- Approvals and documents
- Messages

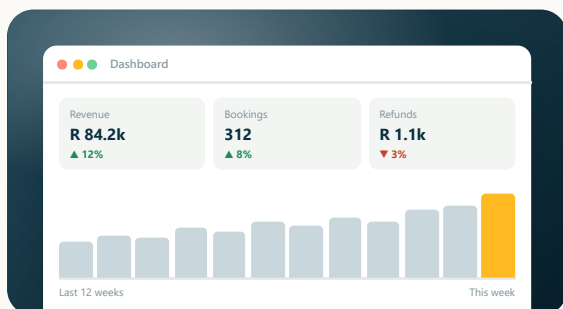

Field service engine

Jobs out, crews moving, nothing missed.

Job cards, routes and proof of work for teams on the road, from installers and technicians to cleaners and couriers.

- Job scheduling
- Photos and signatures
- Route planning
- Job costing

Operations dashboard engine

Your numbers, live, in one place.

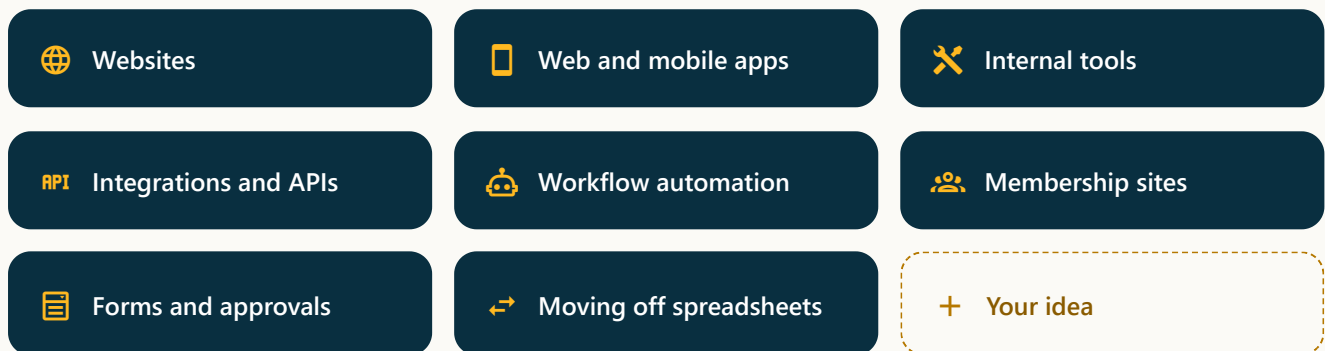

Brings sales, bookings and operations data into one dashboard that shows how the business is doing today, not at month end.

- Live figures
- Alerts
- Reports and exports
- Connects your existing tools

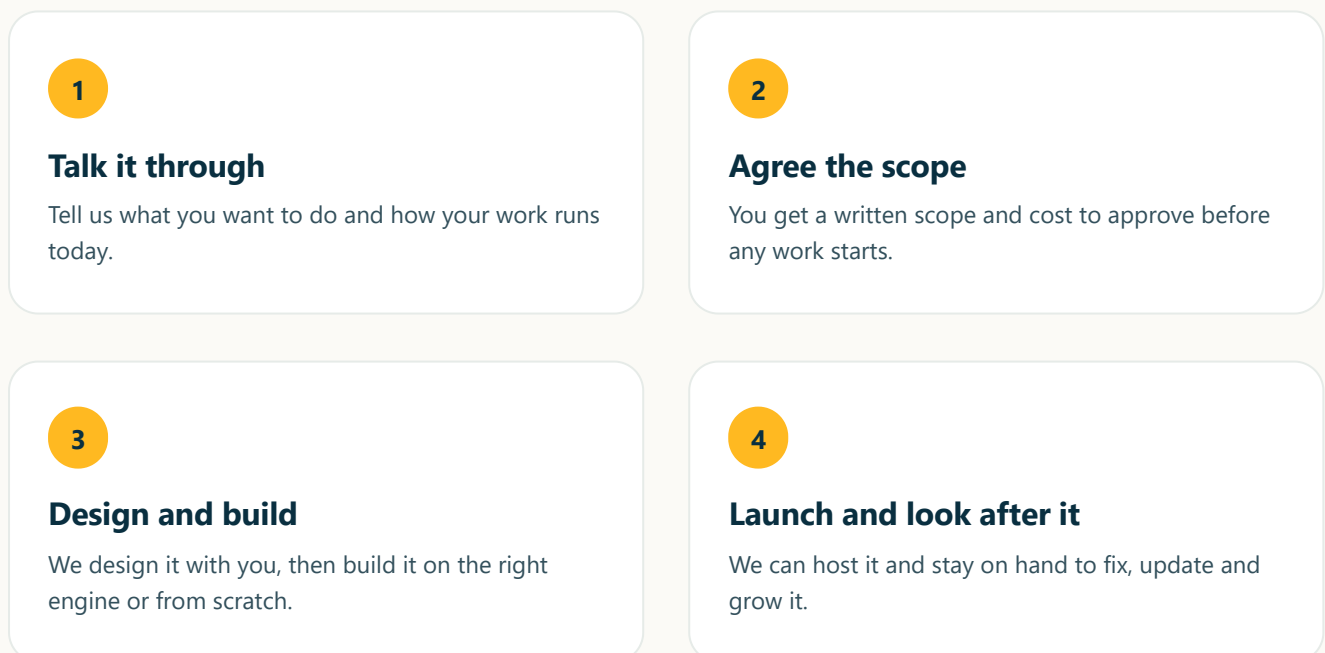

BEYOND THE ENGINES

Your idea isn't on the list? Good.

Most of what we build mixes our engines, and plenty of it starts from a blank page. If software could do it, we can design, build and host it.

HOW A PROJECT WORKS

One team for design, development and hosting, from the first conversation to launch and beyond.

LET'S TALK

Tell us about your project.

One part of the job or all of it: a design, a developer, somewhere reliable to host, or the whole thing from first conversation to launch.
